

ID_Workshop_02

Materials for the second interaction design workshop

The application

Try out the stopatch application [here](#)

Node

- [Download Node](#) from the official website

Using React barebones

- [Adding React as a library to a website](#)

Create-React-App toolchain

[Documentation for Create-React-App](#)

Create-react-app command:

```
npx create-react-app my-app-name
```

Passing around functions and data

- [This is why we need to bind event handlers in Class Components in React](#) - a more detailed explanation on why it is necessary to "bind" functions that are
- [Passing event handlers into components](#) - A short summary of how to pass functions into components

General Resources on React

- [The official documentation](#)
- [React for designers](#) A nice overview on how to get started and where to find tutorials
- [reactjsexample.com](#), a large collection of React-examples, from single components to entire applications
- [This curated list](#) of React-Component implementations of many design systems

Third party packages

- [Material UI](#)
- [Lottie React](#): A Wrapper around the lottie library that

Deployment

[10 Ways to deploy a React App](#) - an overview of different deployment methods
